Projects

2022-2023 (Final Year Project)

Food Waste Management With Food Spoilage Detection

A portal for managing the wastage of the food by distributing them into needy people. Frontend of the project will be created by HTML , CSS , JS and ReactJS and there will be a database for Authentication of Users . AI is going to be used to get the location of Donors . We are going to use multiple sensors in IOT to detect the spoilage of the food and from that we can also predict the life of a food .

2021-2022

Placement Management System

A Portal for Placement Management in the college with yearly analysis of already Placed student and upcoming companies . MySQL was used to store the data of the Placed students and Companies .

2021-2022

Skin Derma

It is cosmetic based E-commerce website project, which is done by using HTML, CSS and JAVASCRIPT. Here when user will visit the site they can register them self in our webpage to get best products at best price .

2020-2021

Stock Market Prediction

This Project is finalized under python and machine learning. This system had data's of different different company and predict their share .Help shares holder to decide when to buy and sale the shares.
